DRAFT · AWAITING GIDEON'S APPROVAL

Self-reported CO_2 impact in the Nexus portfolio

Verbatim figures from each startup's own website or investor deck — linked to Nexus cards. Labels: Self-reported, Target, or Evaluated (third-party verified only).

—

Shell layout from `decks/_templates/clp26-rein-shell/` (PR #126). Data: `research/nexus-co2/co2.csv` + `co2-decks.csv`.

Deck-sourced cards

How these numbers were collected

Own sources only

Website copy or the startup's investor deck — not third-party market sizing unless clearly labeled as the company's own target.

Impact labels

Self-reported, **Target**, **Evaluated** (third-party verified only when the source says so). Counters stay separate by label and by metric type (**mitigated**, **avoided**, **managed**, **sequestered**).

Deck pass

47 decks in the Drive manifest; 17 with CO_2 language; extracts in `co2-decks.csv`. Deck citations use title + date only.

Nexus links

Cards link to nexus.cleantechhub.net startup pages when slug is known.

Explore & counters

Country All Sector All Theme All Metric All Source All Label All

tCO_2e (log) —

Reset

Totals sum filtered rows within each impact label and metric type only. Never combine Self-reported + Target + Evaluated.

Claim size (filtered)

One bar per row. Fill = metric type; border = impact label (see legend).

All claims

Search startup or quote...

Startup	Metric	Label	tCO_2e	Source	Period	Quote	Citation

Portfolio scan status

Website waves 1–7 plus investor-deck extract pass (Nov 2026). Most startups publish no explicit tCO_2e on either channel.

Investor-deck sources (one card per startup)

Each card shows the strongest deck-sourced claim for that startup; full list in the table above.
