Datalab

Observatorio de la Tierra

OPEN CONSORTIUM · DATALAB

Open Air Sandbox

Innovation space with a steward model: the community shares data and tools under clear rules. Datalab is the data engine under the **Tecnológica** lens of the Earth Observatory at Universidad Externado de Colombia.

Steward model

A steward custodies the sandbox, sets access rules, and keeps traceability. Partners bring use cases, permitted data, and feedback without giving up control of sensitive assets.

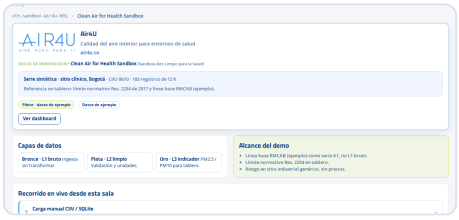

Datalab role

Data infrastructure, test environments, and technical governance to move from exploration to decisions. Visible co-branding: Datalab powered by CleantechHUB.

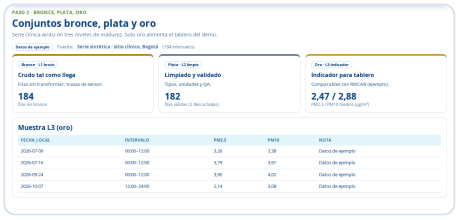

Air4U case

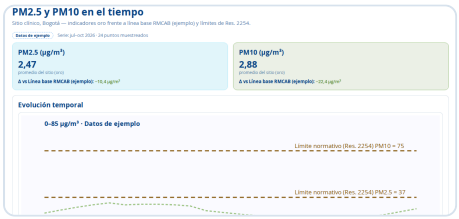

Clean Air for Health Sandbox

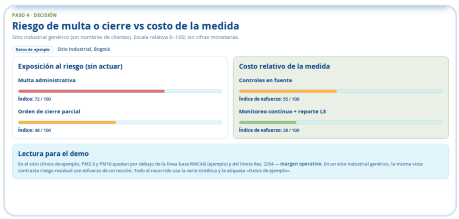

First active case in Open Air Sandbox: air quality visualization, data ingestion, and risk dashboards for public health and technical teams.

Datalab

Observatorio de la Tierra

From exploration to action

Open Air Sandbox connects sensors, open data, and multidisciplinary teams. Views below are demonstration material from the Datalab environment (sample data where applicable).

In development

Open Waste Sandbox
We invite industry and academic actors to co-design the next circular waste consortium.

Open Energy Sandbox
Space for energy transition pilots with shared data and steward governance.

Open Water Sandbox
Upcoming line for water quality and basins. Join as a founding partner organization.
